Mabaneek for Bayan Oman

Your platform from leasing and sales to handover

First meeting · 16 Jumada al-Awwal 1448 AH · 27 October 2026

Jadwa for Studies and Development · version 0.15.0 · illustrative data

The problem

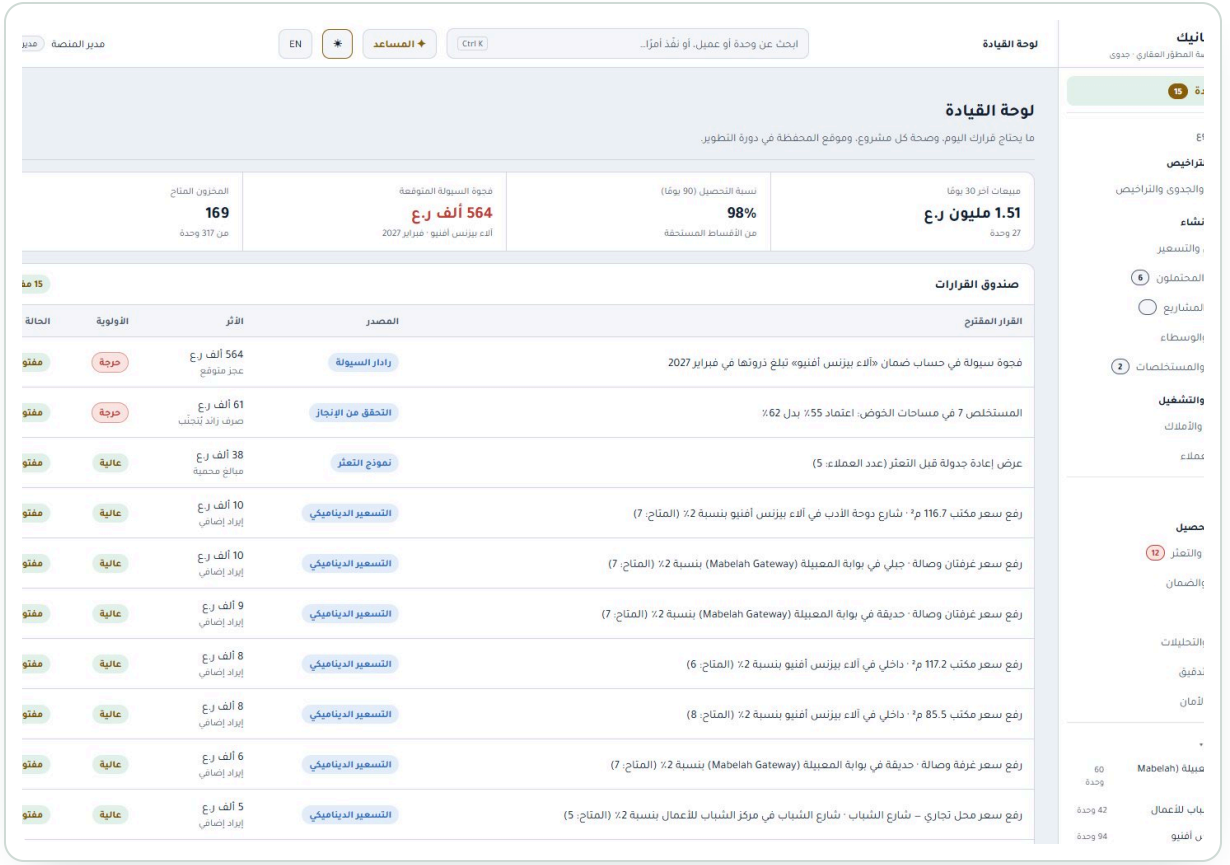

Three problems of a developer that sells and leases at the same time

- Leases and quarterly instalments scattered across sheets: A contract in one file, a quarterly payment in a bank statement, a renewal discovered after the contract has ended.
- One building, sold and leased together: At Masahat Al Khoudh some shops and offices are for sale and others are kept for rent.
- A group with more than one entity: Bayan Investment House and Bayan Oman each need their own data and their own letterhead, without separate systems and duplicated accounts.

The platform

One platform for your whole portfolio: leased, sold and handed over

- 1 · Land and permits, 2 · Sales and construction, 3 · Handover, operations and leasing
- Across the cycle: liquidity and escrow, reports, audit log, administration and security
- Arabic first, right to left, Hijri first, Islamic finance only
- One developer per entity of the group, isolated at database level

Your company inside the platform

Your projects, plans and letterhead, as they are

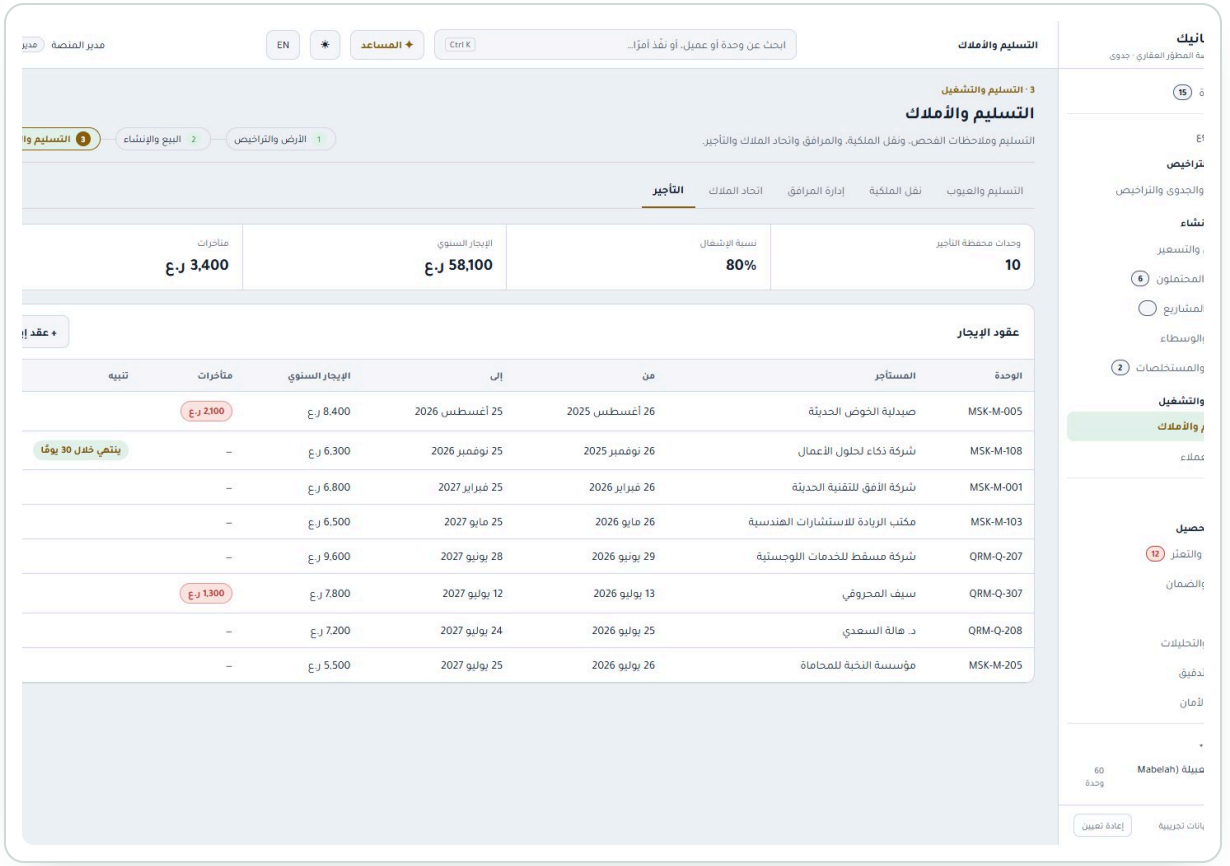

- Masahat Al Khoudh · Al Shabab Business Centre · Alaa Business Avenue · MQ Residences · Mabelah Gateway · Al Khuwair Square
- The ground-floor plan with markers for all twenty shops, and the plans of your three brochures
- Prices, rents and sales ratios are illustrative until we receive your schedules

Leasing

The leasing portfolio: contracts, quarterly instalments, arrears, renewals, occupancy

- Units you keep are never sold and never appear in sale offers
- Quarterly or monthly instalments, and a late one shows at once
- A renewal alert ninety days before a contract ends

From quote to contract

The tenant and buyer journey, on your letterhead

- A quote for an office on a non-interest plan, then booking, identity check and a signed contract
- An invoice and a receipt for every instalment, with your logo, stamp, a verification code and a QR
- Delivery by print, email or a signed WhatsApp link

البند	القيمة
سعر القائمة	43,800 ر.ع
خصم 2٪	– 876 ر.ع

The customer app

My unit · Payments · Service · Documents · My place on the plan

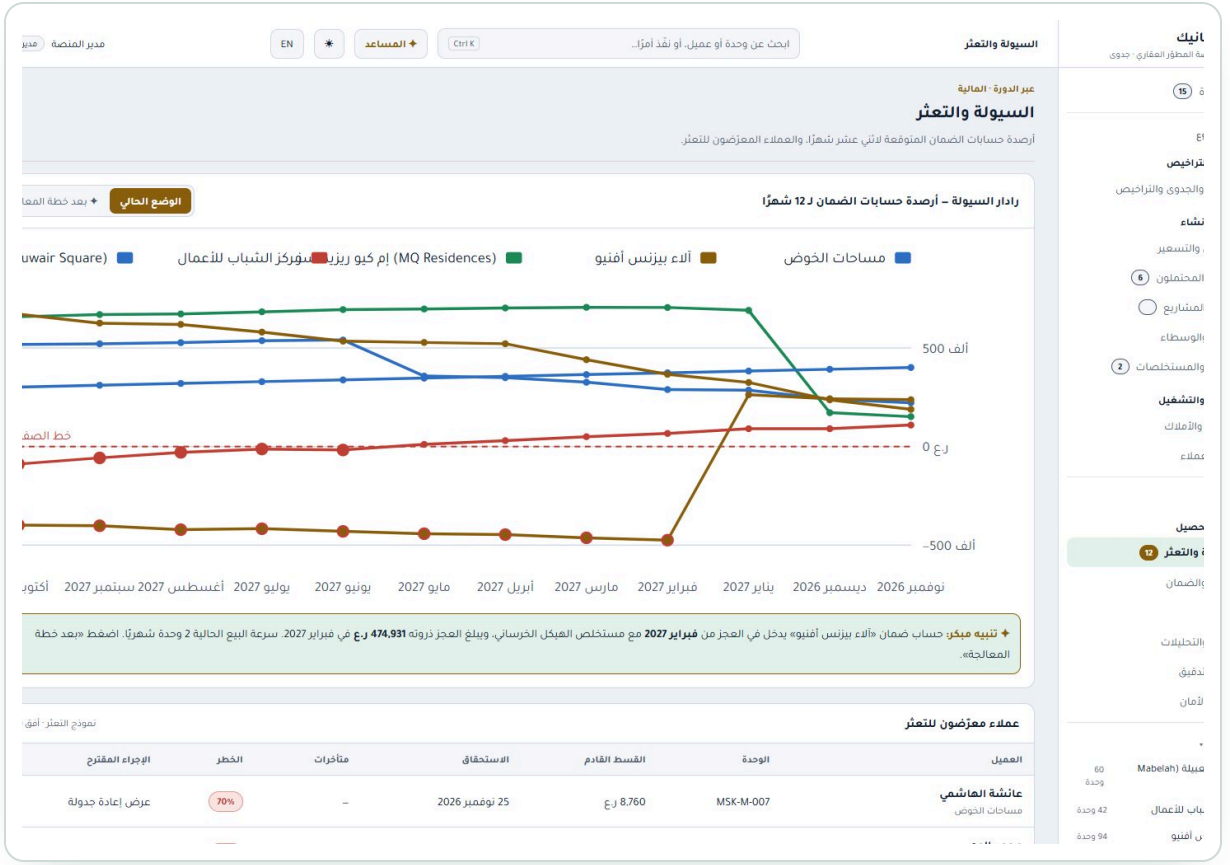

- Construction progress, photos and the expected handover date
- The instalment schedule, online payment and receipts
- The signed contract, the floor plan and the unit marker

Collections and finance

Liquidity radar · arrears · bank reconciliation · escrow accounts

- A monthly forecast of every escrow account, the peak shortfall and its cause
- Customers at risk of default, with rescheduling before the delay
- A late-payment charge is a donation, not revenue, and no plan carries interest

Marketing and reports

A board that classes every project, non-interest campaigns, an ad studio, ten ready reports

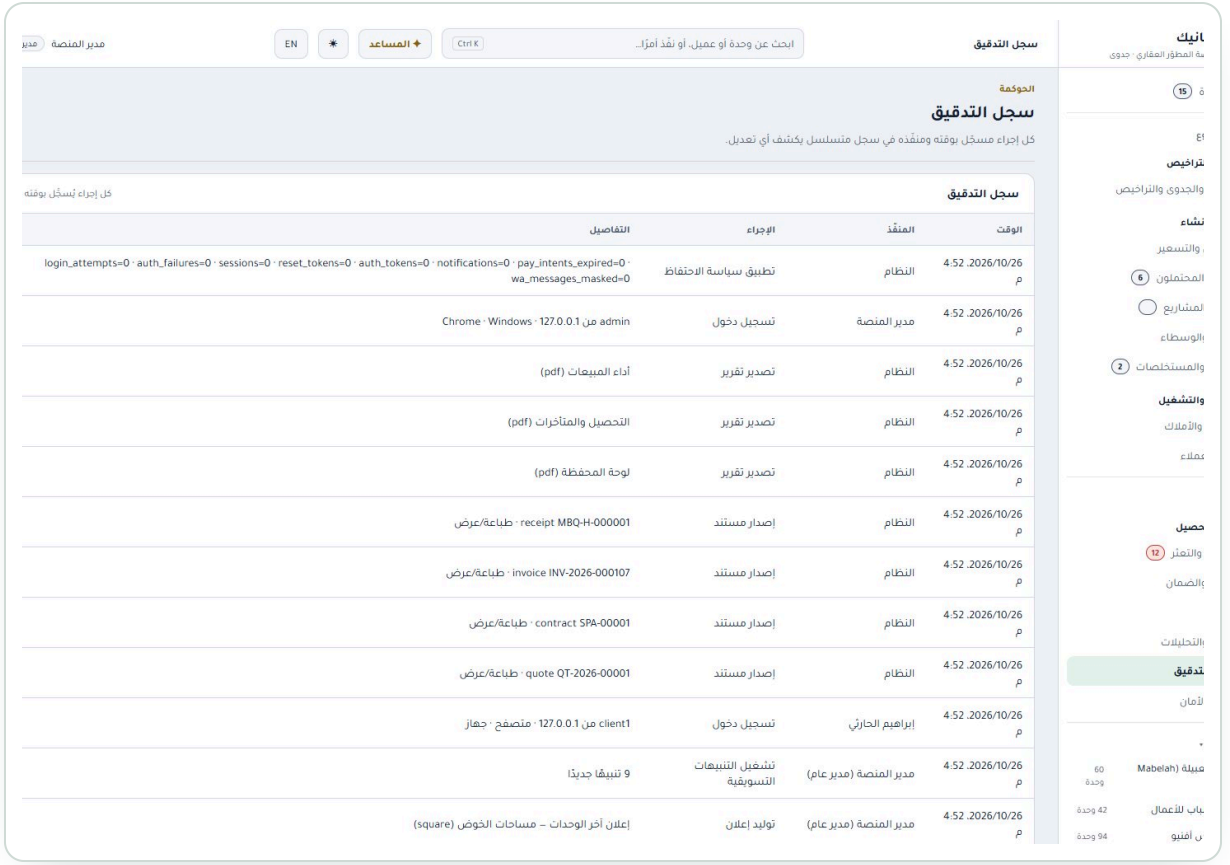

- The project that needs action shows up with its signals and suggested actions
- An ad on the real Masahat render, Arabic text composed in code, no people
- PDF and CSV reports with charts, scheduled by email

Governance and security

What reassures management

- An audit log chained by hash that nobody can edit
- Two-factor sign-in, sessions per device, roles and permissions enforced on the server
- Encrypted personal data, and public verification of every document by QR

What it takes to go live

From Bayan Oman

1. Real unit schedules, prices and rents
2. Existing lease contracts
3. Logo, stamp and signature at print resolution
4. Images and plans of the other projects
5. An SMTP mailbox and a domain
6. WhatsApp Business (optional)
7. Persistent storage for attachments
8. Approval of the Sharia and legal wording
9. Users and entities

Two ways to work together

No numbers on this slide; they are left for the meeting

	Subscription on Jadwa's hosted platform	A private copy on Bayan's infrastructure
Ownership	A licence to use; the code and operation stay with Jadwa	A licensed copy deployed on Bayan's servers (Docker and PostgreSQL)
Isolation and data	Each entity isolated by rows (RLS) on a shared database; the data is Bayan's and exported on request	A fully private database inside Bayan's infrastructure
Multiple entities	One developer per entity of the group on the same subscription	One developer per entity inside the private copy
Updates	Continuous and automatic with every release	By maintenance agreement, applied to Bayan's copy
Backups	Daily, from Jadwa, with a restore drill	The responsibility of Bayan's team, following the operations runbook
Support and training	Included in the subscription	Included in the implementation and maintenance contract
Initial cost		
Recurring cost		

We suggest a live demonstration on the Masahat Al Khoudh data, leased and sold

One hour at your office in Azaiba · we collect the needs · we agree the model and the timeline
