Mabaneek for Bayan Oman

The short brief: the features in points, on screenshots of the platform

16 Jumada al-Awwal 1448 AH · 27 October 2026

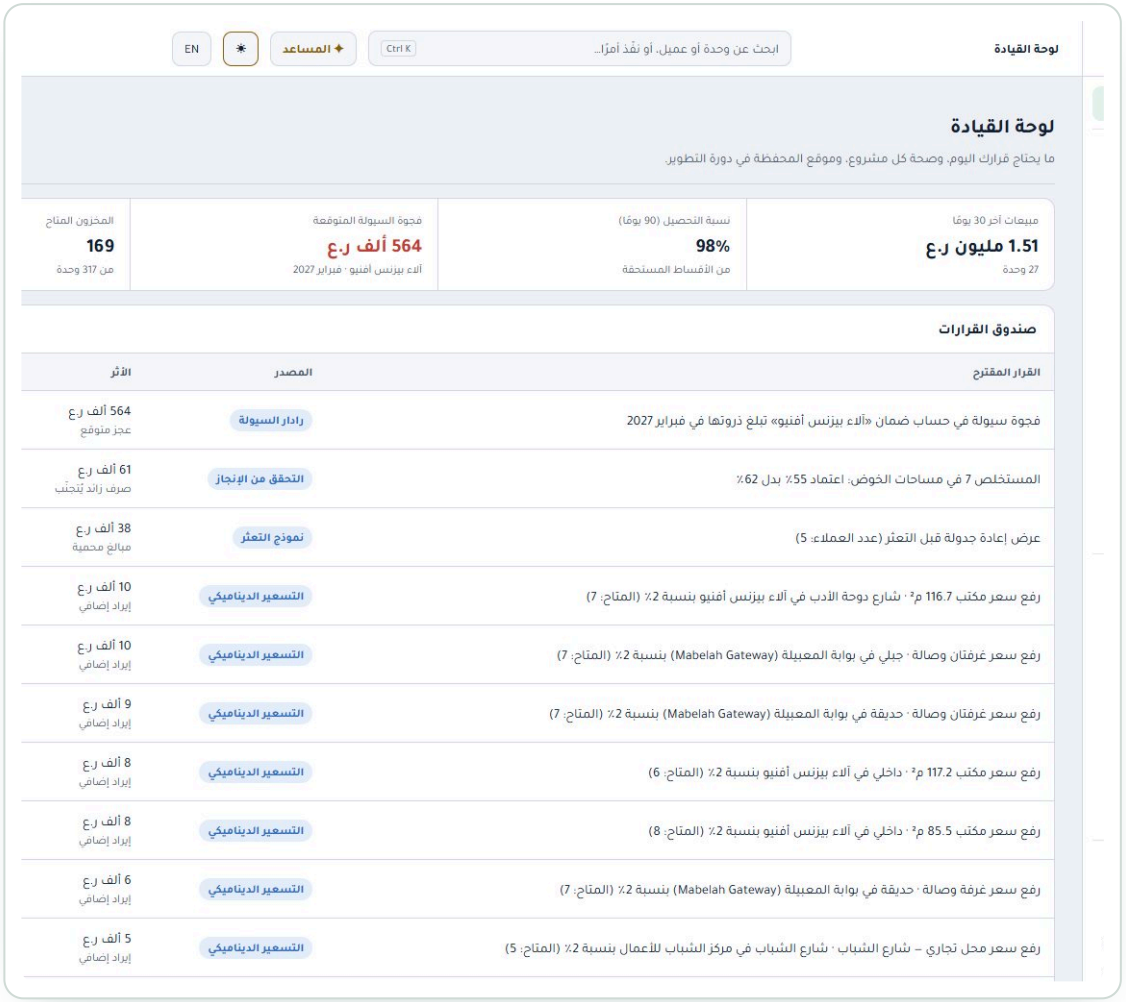

Jadwa for Studies and Development · version 0.15.0 · illustrative data

Dashboard

What needs your decision today

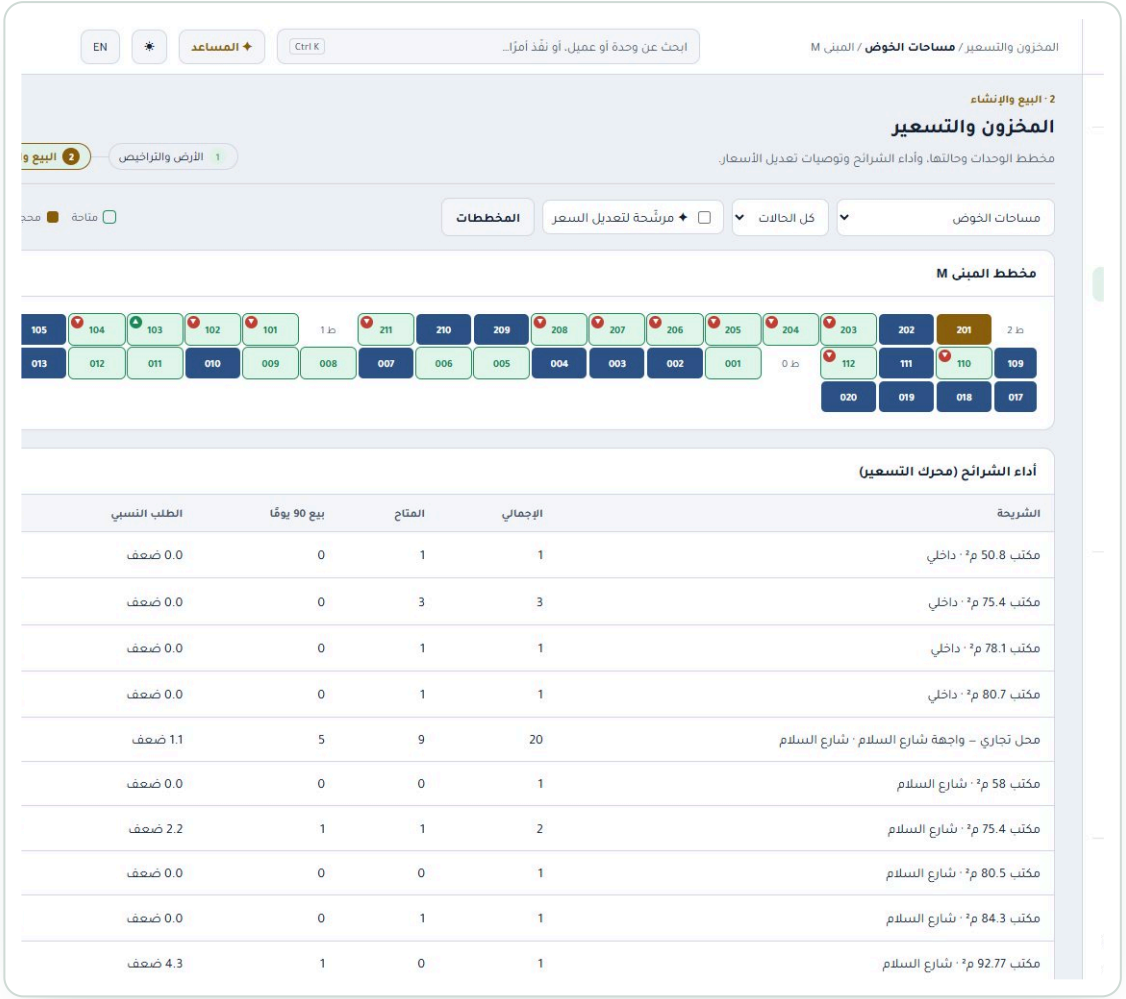

- Four indicators: sales, collections, projected liquidity gap, available inventory
- A decision box ranked by priority and financial impact, with the source of each decision
- The project cycle and your six projects in the side bar
- An assistant that answers from your live data

Inventory and plans

Masahat Al Khoudh on a live plan

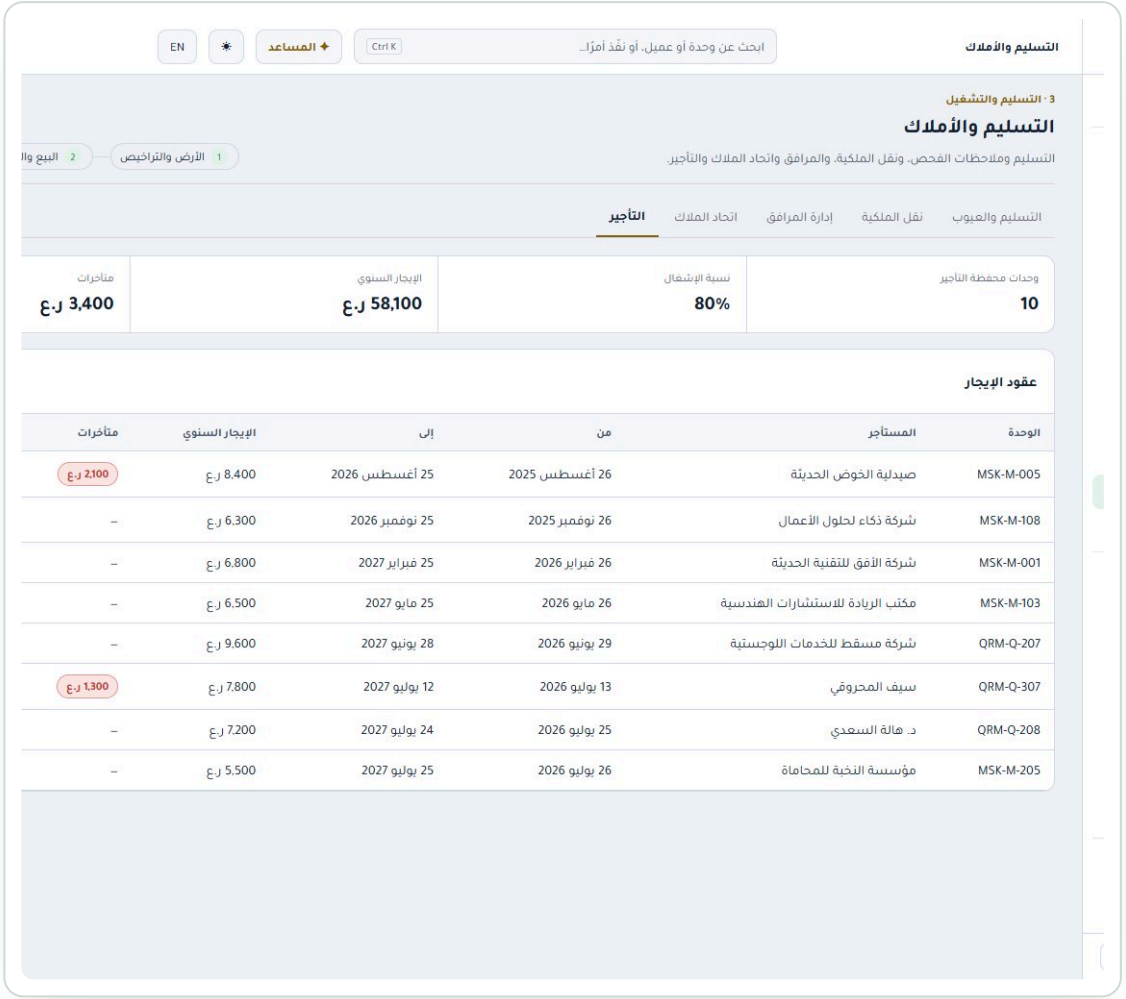

- 43 units (20 shops and 23 offices) with their states on the building plan; units kept for lease are marked
- Segment performance: relative demand per type and view, and the pricing recommendation
- Your real plans: the ground floor with shop markers, and the three brochures
- The customer sees their own floor and their own unit marker only

Leasing

The leasing portfolio: contracts, instalments, renewals

- Kept units with their contracts: tenant, annual rent, instalment frequency
- Quarterly or monthly instalments, and a late one shows at once
- A renewal alert ninety days before a contract ends
- Occupancy, annual rent and arrears as live indicators

Quotes and contracts

From a quote to a signed contract

- A numbered quote on a non-interest plan (milestones, 60/40, murabaha), with a validity and a discount ceiling per role
- It becomes a booking in one click at the quoted price
- Identity check, then a contract sealed by a hash and signed by the customer from their phone
- Quote, contract, invoice and receipt as PDF on your letterhead, with a verification code and a QR

سعر القائمة	43,800 ر.ع
خصم 2٪	− 876 ر.ع
السعر المعروض	42,924 ر.ع

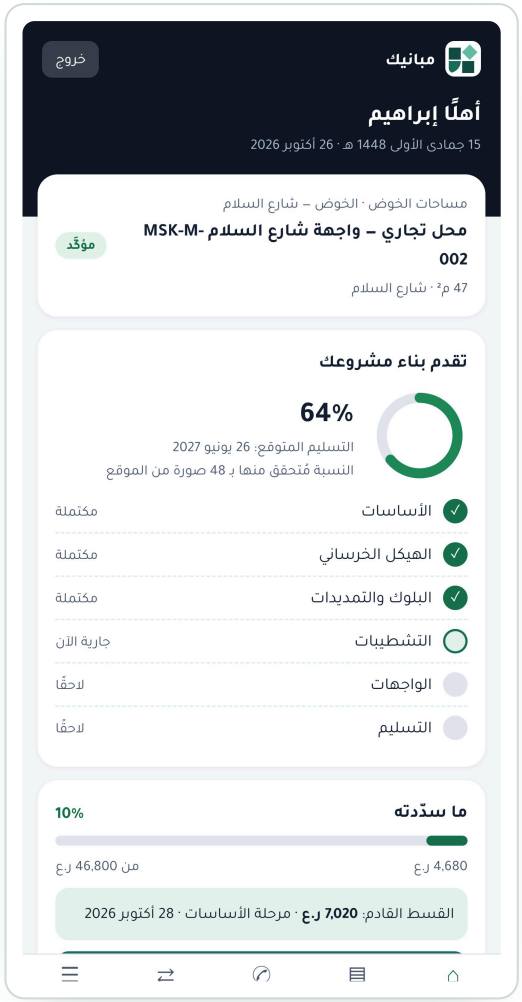

جدول الدفعات المقترح (لا تتضمن أي فائدة أو زيادة لقاء الأجل؛ الثمن ثابت):

#	الدفعة	تاريخ الاستحقاق	المبلغ
1	عربون الحجز	15 جمادى الأولى 1448هـ الموافق 26-10-2026م	4,292 ر.ع

Customer app

My unit · Payments · Service · Documents

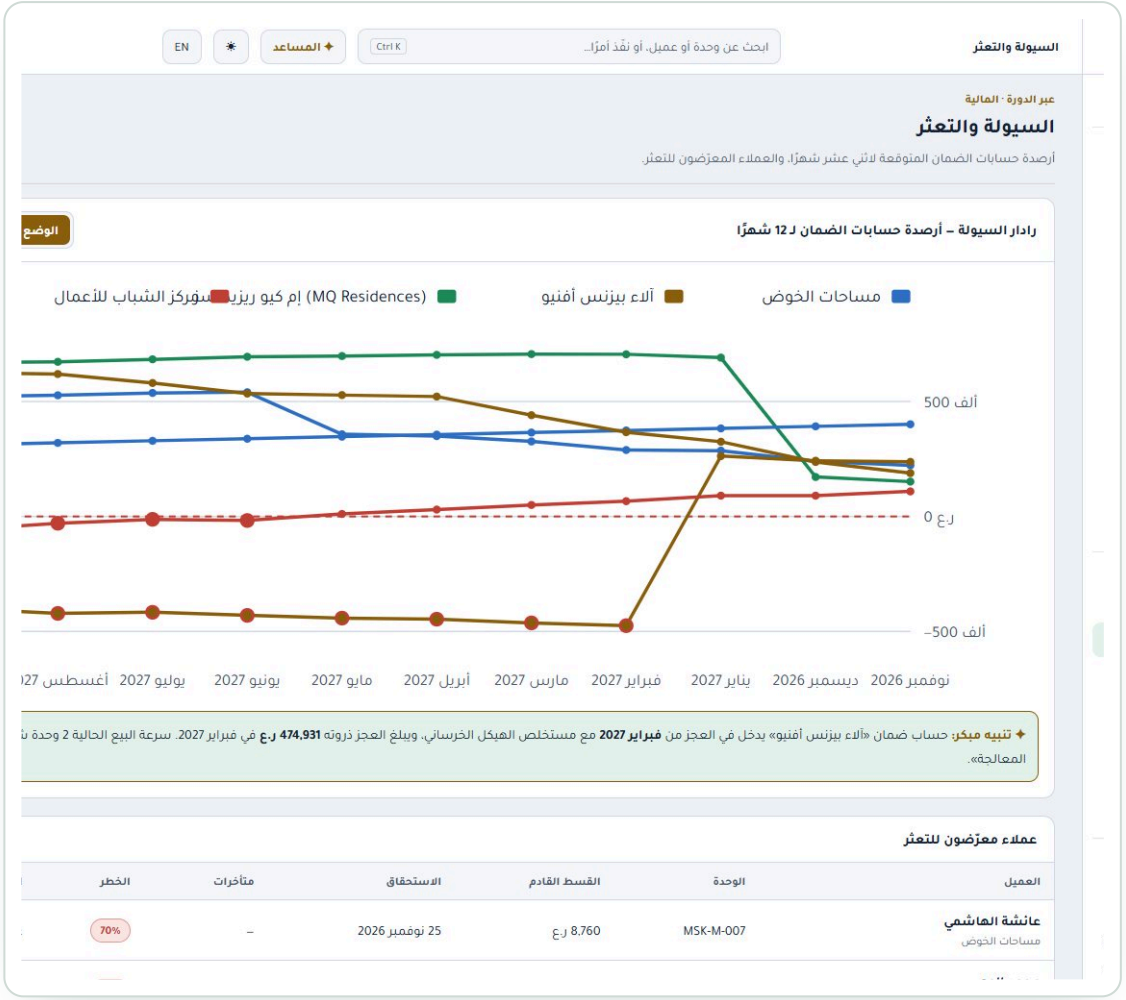

- Construction progress, photos and the expected handover date
- The instalment schedule, online payment and receipts
- The signed contract, documents and the unit plan
- After handover: service requests, and resale with the developer's approval

Collections and finance

Liquidity radar and default risk

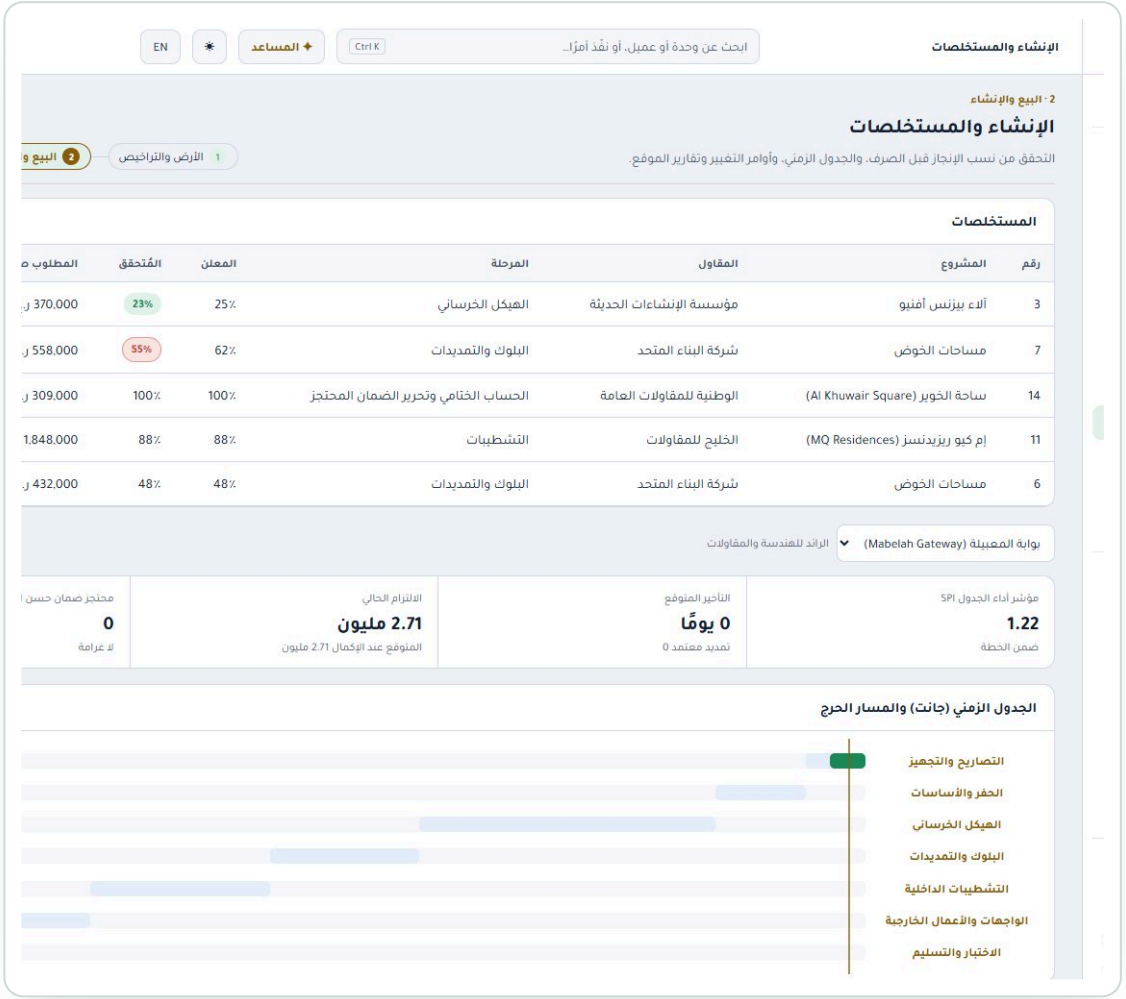

- A monthly forecast of each escrow account, the peak shortfall and its cause
- Customers at risk of default, with a rescheduling suggestion before the delay
- Arrears by age, bank reconciliation, invoices and VAT
- Lateness is a donation under the contract, not revenue: Islamic finance only

Construction and handover

Actual progress against sales

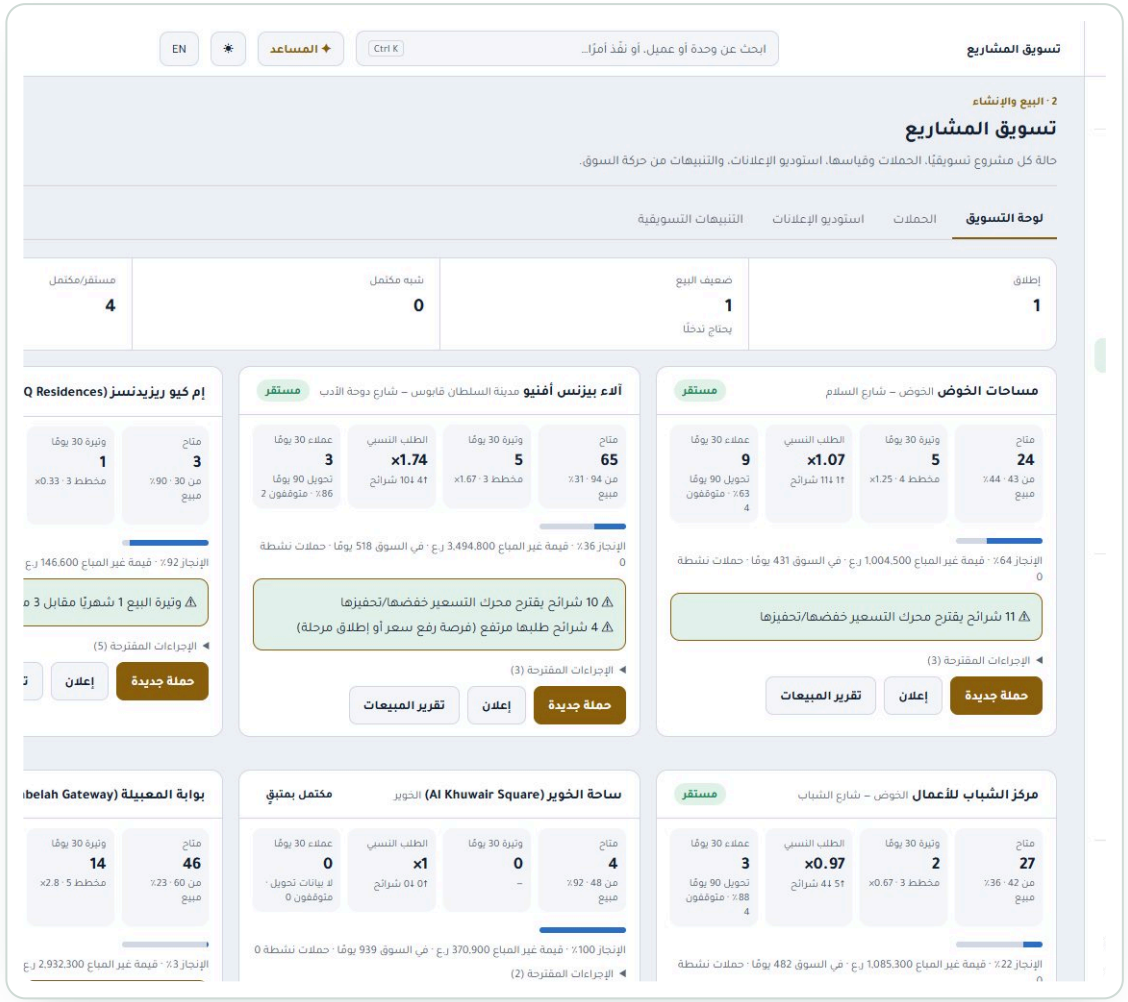

- Payment certificates are approved at the percentage the evidence supports (photos and minutes)
- Progress is compared with sales per project (Masahat Al Khoudh at 64% in the demo data)
- Handover with an appointment, a certificate and a defects list, and never before the handover instalment
- Owners' association: a budget and votes weighted by unit area

Marketing and ads

Which project needs action today

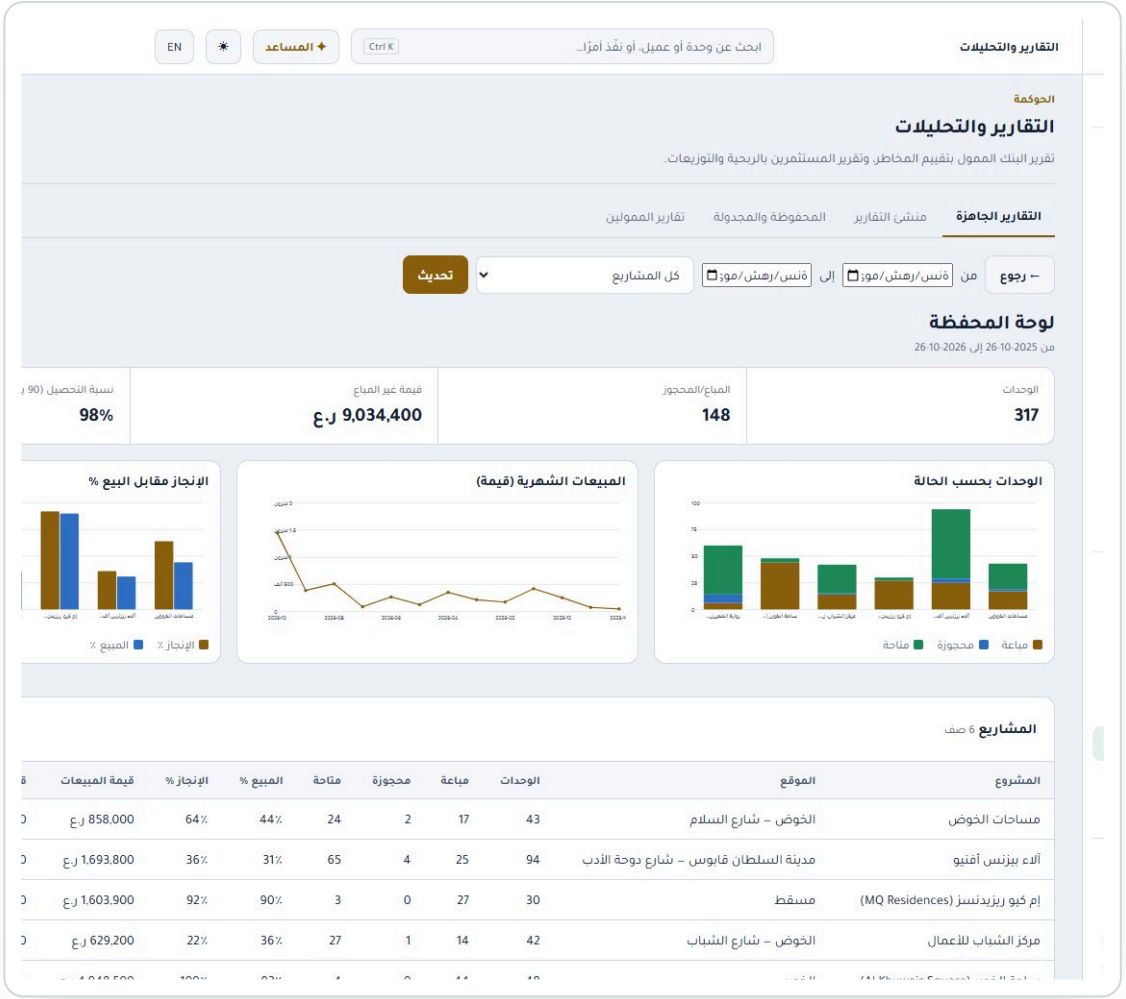

- A board that classes each project from its live data: launch, weak sales, steady, near complete, complete
- Campaigns with a structural offer only (the platform rejects any offer with interest) and a tracking code that measures cost per lead
- An ad studio: 6 templates in 3 sizes on your real renders, with no people
- Daily marketing alerts from market movement

Reports

Ten ready reports and a builder that needs no SQL

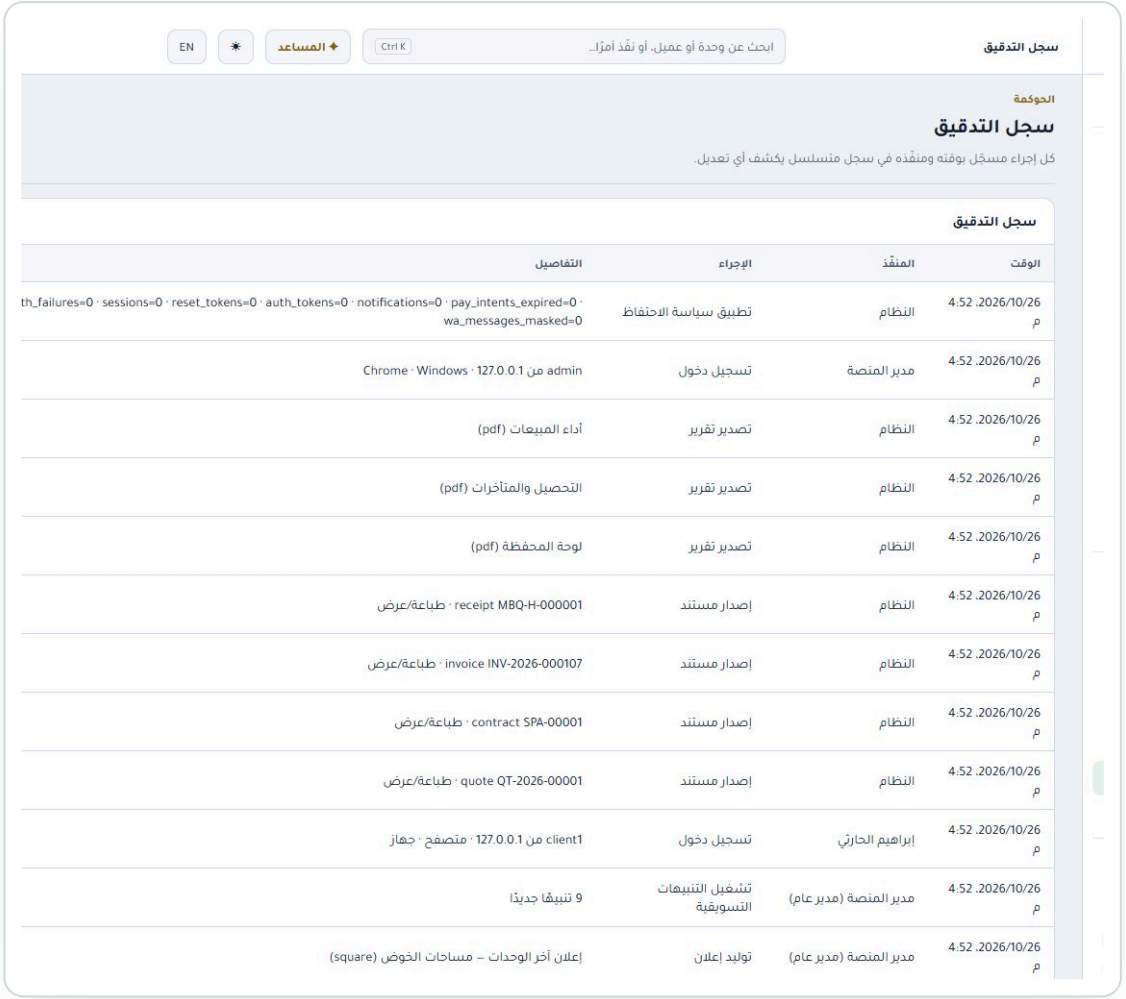

- Portfolio, sales, funnel, quotes, brokers, collections, liquidity, inventory, construction, handover
- A report builder over approved datasets with filters, grouping and charts
- CSV and PDF export on your letterhead, saved and scheduled by email
- Lender and investor reports with their own permissions

Security and governance

What reassures management

- Every action is a line in an audit log chained by hash, which nobody can edit
- Two-factor sign-in, sessions per device, remote sign-out, graded lockout
- Roles and permissions on the server; encrypted personal data; each developer isolated in the database
- Public verification of any document by its code, with no personal data shown

What it takes to go live

Unit schedules, prices and rents · existing lease contracts · logo, stamp and signature at print resolution · images of the other projects · an SMTP mailbox and a domain · persistent storage for attachments · approval of the Sharia and legal wording

Two ways to work together: a subscription on Jadwa's hosted platform, or a private copy on Bayan's infrastructure. We suggest a live demonstration on the Masahat Al Khoudh data.
